

How to build a project

Share your project at Coolest Projects

26 May 2018

coolestprojects.org

Pick a problem

1

How do you want to change the world with technology? Look up how other people have solved similar issues.

Who are you helping?

2

Think about what kinds of people your project will help and how it will work best for them. How can you adapt it to their needs?

Generate ideas

3

Collect ideas, no matter how wacky, for how your project might work.

Pick your favourite!

Design and build

4

Draw some designs for the idea you picked, then start making it! Remember your Dojo's Mentors can help if you have trouble.

Test and tweak

5

As soon as some of the project works, get people to try it!

Ask them how to make it better or more useful. Tweak it and test it again.

We're going to create something awesome and share it with the world!
